

Sistemas de codificación de Audio y Video

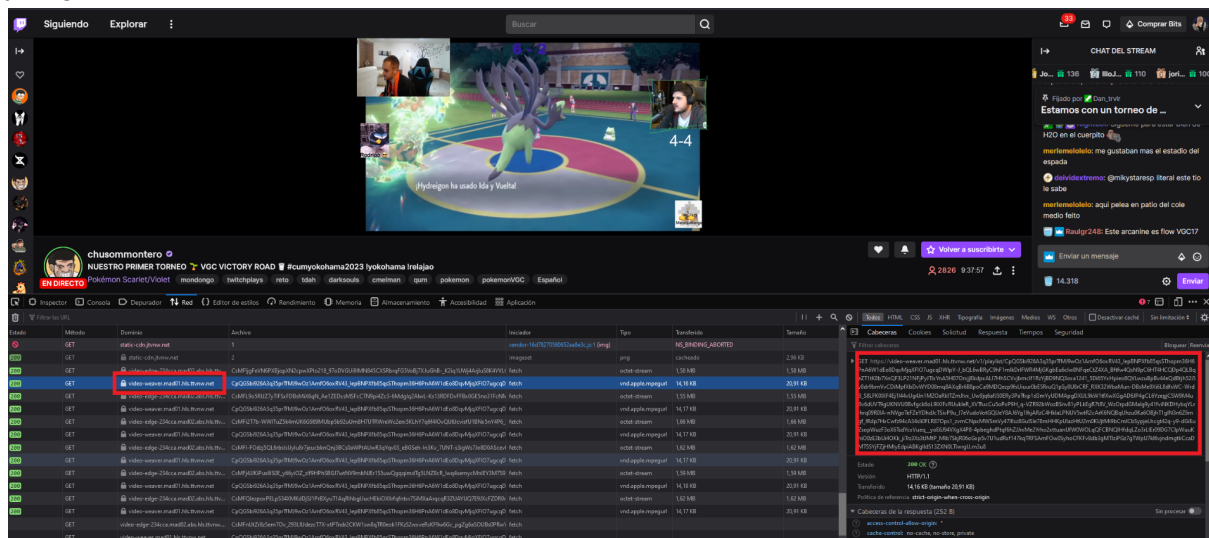

Práctica 3

Ejercicio 4:

Se ha accedido a un stream en la plataforma twitch.tv a través del navegador Mozilla Firefox. En este, inspeccionando desde el apartado 'Red' se pueden visualizar todos los chunks que se van recibiendo del stream. En este caso se trata de paquetes '.ts' y '.m3u8' como los generados en el ejercicio 1 de esta misma práctica, esto nos indica que se trata de una codificación HLS.

En el archivo de python se ha generado un pequeño menú para escoger cualquiera de las funcionalidades de los 4 ejercicios.

En específico en el ejercicio 4, para probarlo, se debe copiar un link de un paquete o chunk y pegarlo en la función '4' cuando se le pida. Podrá visualizar ese chunk.

The screenshot shows a web browser window with a live stream of a Pokémon battle. The browser's developer tools are open, displaying the Network tab. A list of requests is shown, with one request, 'video-edge-234cca.mad02.abs.hls.ttvnw.net', highlighted. The details of this request are shown on the right, including the full URL and response headers.
